Axians OT Security Service
Extending security operations center into OT

Threat actors are constantly evolving. Historically, attacks targeted IT systems, but the focus is rapidly expanding towards Operational Technology (OT), where vulnerabilities can directly impact production, safety, and physical assets.

At Axians, we make it easy to protect your entire environment—IT and OT alike. Our OT Security Service is not just a standalone tool; it is a powerful extension of the Axians Security Operations Center (SOC). By integrating OT monitoring, assessment, and response directly into our SOC, we offer unified, 24/7 protection that complements your existing security investments.

The Path to OT Security—Powered by Axians SOC

▶ **OT Environment Assessment:** Together with our analysts, we conduct a thorough review of your OT landscape, utilizing market-leading tools for passive monitoring and real-time device discovery.

▶ **Continuous Monitoring & Incident:** Response: Axians SOC provides round-the-clock surveillance. We extend rapid detection and response capabilities beyond IT to cover OT assets, industrial networks, and IoT devices.

▶ **Vulnerability Detection & Analysis:** Axians identify and analyze vulnerabilities across all managed, unmanaged, and agentless devices, prioritizing risks to recommend targeted actions.

▶ **Remediation & Advisory:** Axians experts orchestrate remediation steps—quarantining, blocking, or limiting device access—while providing actionable recommendations tailored to your specific regulatory and operational requirements.

Ready to secure your entire environment?

This service is built on Axians' strong SOC foundation, expanding your coverage into OT and IoT so you can stay ahead of evolving threats and ensure business continuity.

Whether you're an existing Axians customer or new to our services, we are here to help you take control.

Why Axians + OT Security?

- ▶ **Integrated Security:** A direct extension of Axians SOC, delivering seamless protection for IT and OT without creating silos.

- ▶ **Expert Partnership:** Axians analysts and engineers work alongside you, translating complex technology into real-world security outcomes.

- ▶ **Operational Integrity:** Passive monitoring ensures no disruption to your critical industrial processes.

- ▶ **Regulatory Confidence:** Automated compliance tracking reduces audit efforts and minimizes the risk of penalties.
