

Smart digitalization is not primarily about technology. It is about identifying the right focus for development that will make a difference for your business.

WORKSHOP:

Business Discovery by IOT

AXIANS : IN THE HEART OF DIGITAL TRANSFORMATION

Working and living in a world that is always online and faced with an ever expanding volume of data to collect, carry and transfer - communications infrastructures and IT resources have to be constantly adapted. With a team of over 450 IT and Telecom professionals in the Nordics and an international network of over with 8000 employees in 15 countries, Axians supports organizations with smart ICT-solutions in the forefront of technology. Whether it is a private-sector firm, operator, service provider or public-sector entity, Axians will help to support the digital transformation of your organization.

Axians is a part of Vinci Energies .

Smart Digitalization is not primarily about technology. It is about new revenue streams and cost savings. It is about choosing the use cases that will make a difference for your business.

To be able to identify the valuable use cases you need to understand what the new IT landscape brings to the table with all the new capabilities of the public cloud. But more importantly, you need domain knowledge, you need to understand the business and operation of each branch.

This combined competence is rare and is why Axians together with Actemium developed this workshop together. With your business stakeholders, we will walk you through a well-prepared set of use cases and business opportunities. The outcome of the Workshop will be a prioritized set of use cases to ensure that, if a proof of concept is going to be made, we will choose the right one.
